IMMUNEA

FAST-ACTING NATURAL ANTIHISTAMINE SOLUTION

Fast acting & clinically proven natural antihistamine

IMMUNEA

FAST-ACTING NATURAL ANTIHISTAMINE SOLUTION

Fast-acting allergen blocker

Allergy, immune & respiratory care

Source & sustainability: A safe, drug-free bioactive complex naturalized from specialized quail eggs, providing a clean-label alternative to synthetic antihistamines.

Mechanism of action: Rich in specific ovomucoid proteins that act as natural competitive inhibitors against environmental allergens. These bioactives physically block tryptase and histamine receptors before environmental triggers can spark an inflammatory mast cell response.

Key target demographics:

– Allergic rhinitis sufferers: Adults with seasonal or year-round symptoms; nasal congestion, rhinorrhea, sneezing, and itchy or watery eyes; triggered by pollen, dust mites, pet dander, and other environmental irritants.
– Medication-conscious consumers: People looking to reduce their reliance on standard antihistamines in favor of a drug-free, non-drowsy alternative for daily symptom relief.
– Atopic dermatitis sufferers: Individuals seeking relief from itching, redness, and swelling, with clinical data showing improved sleep quality within the first 4 weeks of use.

Key benefits:

– Fast-acting relief: Provides rapid relief against both indoor allergens (dust mites, pet dander) and outdoor seasonal allergens (pollen).
– Non-drowsy profile: Delivers full-strength respiratory and ocular comfort without causing any central nervous system drowsiness or fatigue.
– Micro-dose efficiency: Requires an exceptionally low clinical daily dosage of just 84mg.

Application profile: Neutral taste and low mass requirement make it perfectly adapted for fast-melting tablets, chewables, pediatric formulations, and convenient on-the-go stick packs.

Supported by clinical studies / 284 separate clinical studies analyzing the efficacy of these specific quail-egg extracts for treating allergic rhinitis.

Product composition

– Quail egg extract & Zinc.

Posology & usage

42 to 84mg, taken upon symptom apparition.

Quality & regulatory status

– Manufacturing: Manufactured in Belgium, following GMP standards.

– Patent: EP0032344.

– Regulatory status: Food supplement.
