IMMUNEA

NATURAL IMMUNE DEFENSE

The Reference Fast-Acting Natural Ingredient for Respiratory and Environmental Comfort

Relief in 10 to 15 minutes. No drowsiness. No weeks of waiting.

Consumers facing environmental and seasonal discomforts are stuck with a frustrating choice: fast-acting chemical drugs that cause drowsiness, or natural remedies that take weeks to work.

Immunea breaks this trade-off. This patented, clinically proven ingredient made from standardized quail egg homogenate blocks the histamine cascade within 10 to 15 minutes. It delivers rapid, on-demand relief from sneezing, congestion, and itchy eyes, while preserving alertness.

Formulated into premium wellness products, Immunea offers an immediate, safe, and scientifically proven answer the moment discomfort strikes.

Key Comparison: Immunea vs. Traditional Solutions

Performance Metric	Synthetic Antihistamines	Traditional Herbal / Nutraceutical Solutions	Immunea
Origin	Chemical drugs	Natural	Natural: quail egg homogenate
Onset of Action	Fast-acting	Weeks of continuous use required	10 to 15 minutes
Mode of Use	On demand	Continuous use to saturate the body	On demand
Drowsiness / Sedation	Common side effect		No drowsiness, sedation, or impaired alertness

I. Mechanism of Action: Direct Interruption of the Inflammatory Cascade

Immunea's fast efficacy relies on targeted biological activity at the cellular level:

- Serine protease inhibition: The specific protein fraction within Immunea, notably ovomucoids, acts as a direct inhibitor of the enzymes that trigger the allergic reaction.
- Mast cell stabilization: In vitro and laboratory studies show that quail egg albumen effectively suppresses mast cell degranulation, blocking the massive release of histamine, tryptase, and pro-inflammatory cytokines.
- Immune pathway modulation: By acting upstream in the inflammatory cascade, Immunea neutralizes irritation before it compromises the mucosal barrier. It does so without significantly altering global IgE levels, which allows a synergistic approach alongside conventional therapies.

II. Clinical Validation: Proven Efficacy Data

The active matrix behind Immunea is backed by a robust scientific dossier, highlighted by a comprehensive systematic review of clinical data.

1. Fast-Acting Relief (10–15 minutes)

Clinical evidence: Randomized placebo-controlled trials using standardized allergenic nasal challenges show a significant improvement in Peak Nasal Inspiratory Flow (PNIF) and a reduction in nasal obstruction within the first 15 minutes.

2. Reduction of Core Symptoms

Clinical evidence: Clinical trials confirm a strong reduction in sneezing, runny nose (rhinorrhea), and itchy eyes and nose in patients with allergic rhinitis.

3. Medication-Sparing Effect

Clinical evidence: Regular supplementation significantly reduces reliance on standard rescue medications and topical corticosteroids, enhancing overall respiratory quality of life.

III. Safety and Tolerability Profile

- Non-sedative formula: Unlike many standard synthetic antihistamines, Immunea causes no drowsiness, sedation, or impaired alertness.
- Excellent tolerability: Extensive clinical data show that side effects, such as mild nasal dryness, are extremely rare, transient, and mild.
- Precaution: Contraindicated only in individuals with a known allergy to egg proteins.

IV. Key Benefits

- Fast-acting: Relief within 10 to 15 minutes.
- On-demand use: No weeks of continuous use needed to take effect.
- Natural and patented: Standardized quail egg homogenate.
- No drowsiness: Preserves alertness.
- Complementary: Can be used alongside conventional therapies.

V. Scientific Substantiation

Backed by a 2025 systematic review of clinical studies (Antonelli et al., Nutrients) and by randomized placebo-controlled trials (Benichou et al., 2014; Andaloro et al., 2022).
